

PRODUCT SPEC SHEET

SCI - GAMMA™ API Natural Gamma Ray

Scientific Drilling's Sci-Gamma is a probe-based, API calibrated sensor that detects naturally occurring gamma radiations from the formation.

Sci-Gamma can be run with any of SDI's MWD systems in all configurations.

On the Bottom Hole Assembly (BHA), Sci-Gamma is placed just above the motor allowing the reservoir to be quickly detected.

Real-time gamma data from the tool can be used to correlate with offset logs giving the client confidence as drilling progresses.

DELIVERING THE ULTIMATE VALUE

- Provides API gamma ray measurements that are 20 to 25 ft (6 to 8m) closer than standard MWD measurements
- Works seamlessly with both MP and EM MWD systems to send real-time measurements to surface
- Innovative design allows one probe to run in all BHA sizes

TARGET APPLICATIONS

- Distinguish shales from non-shales
- Lithology identification
- Formation correlation
- Picking casing and coring points
- Geosteering
- Shale volume estimation
- Formation thickness
