

### FACILITIES SOLUTIONS

For many E&P companies surface facilities are a means to an end rather than your core business. Let JH help make sure your facility meets your operational and budgetary goals. With experience in Eagle Ford, Bakken, and the Delaware Basin, JH can help you manage the heat, the cold, high water cuts, large gas volumes, H2S, and salt water disposal. We have full engineering, procurement, and construction management experience that we can bring to your company to help your project meet schedule and budget targets.

### PRODUCTION ENGINEERING

With a decade of remedial and artificial lift experience, JH can help you select the right artificial lift system for your new wells or re-design your old systems to perform like you hoped they would. Our operations experience can help you manage your LOE from electrical/chemical consumption, to remedial costs due to failures, to one-off projects like large fishing jobs outside your normal scope.

### BIG DATA ANALYTICS

A buzz word for most, but JH staff have been practitioners in this space for seven years, helping teams actually operate more efficiently with systems that can interface with SAP and make work order creation 30 seconds instead of 10 minutes, manage load hauling and permitting, and derive insights from your own or public data.

## DECADES OF EXPERIENCE

JH works with both upstream and midstream oil and gas companies to support them on challenging projects. JH is a full engineering, procurement, and construction management firm.

Let us run the entire project from concept to start up or just fill your team's gaps. Our firm's experience ensures smooth project execution on time and on budget. We take care of the project headaches, so you can take care of your business.
